

Quality Assurance & Quality Control

As a manufacturer of biomedical device, SigmaGraft Biomaterials has Quality Department, and this Department ensures that our products consistently meet the highest quality standards. Thus, this Department is responsible for establishing, developing, and maintaining a quality management system through following manuals and procedures, and performing inspection, product testing, environment/equipment control testing, and process validations.

Do you have a background in science? Are you a problem solver? Are you an organized person? Apply to a position in our Quality Development. There are entry level positions and experienced positions in our Department from Quality Control Inspector, Quality Engineer, to Senior Quality Assurance Manager.

Career development: Many of our entry-level employees gain experience and become leaders in their field. See where your SigmaGraft journey can take you.

Benefits: Our range of benefits can include health care, 401(k) savings plans, paidtime off and more! Find out which benefits you'll get after you choose your role with us.

Responsibilities

- Maintain quality documentation to ensure a consistent, standardized process across the organization
- Design equipment, process, and product validation activities
- Develop and implement methods and procedures for inspecting, testing, and evaluating product compliance to all quality requirements
- Evaluate materials routinely used during production, the work environment, and components during production by performing inspections and testing
- Drive continuous improvement by identifying areas of improvement
